DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group II of claims 43-70, drawn to method for separating tissue in the reply filed on April 16, 2008 is acknowledged. Claims 27-42 and 71-79 have been Election was made **without** traverse in the reply filed on April 16, 2008.

Specification

2. The disclosure is objected to because of the following informalities:
 - (i) page 3, lines 22-23 include the phrase "dissector 10 includes and elongate shaft," where "and" should be replaced with "an."
 - (ii) page 5, lines 6-7 include the phrase "in such situations, the locating the distal," which should be replaced with "in such situations, locating the."
 - (iii) page 5, line 33 contains the phrase "aligned with" repeated in the same sentence.
 - (iv) page 6, line 18 includes the phrase "that the after the surgeon," which should be replaced with "that after the surgeon."
 - (v) page 6, line 24 includes the phrase "the geometry of present example," where "the" is missing.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. **Claims 43, 44, 47-51, 53, 54, 55, 56, and 59-68 are rejected under 35 U.S.C. 102(b) as being anticipated by Boyd et al. (Pub No. US 2002/0087183).**
5. Boyd discloses (Figs. 22-51) a method for separating a tissue at a selected site comprising: positioning a dissection surface of a dissector 140 near to selected tissue, the dissector including an elongated shaft 141 with a dissecting surface at a distal end 144; advancing the dissecting surface through the selected tissue to create a desired dissection path while monitoring the position indicator through the tissue; and simultaneously articulating the dissecting surface relative to the shaft (paragraphs [0091]-[0098]).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3731

7. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 1. Determining the scope and contents of the prior art.
 2. Ascertaining the differences between the prior art and the claims at issue.
 3. Resolving the level of ordinary skill in the pertinent art.
 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
8. **Claims 45-47, 57, 58, and 69-70 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boyd et al. as applied to claims 43, 55 and 67 above and further in view of Wagner (US 2004/02/04734 A1).**
9. Boyd discloses the invention substantially as claimed except for the dissector includes a port for fluid dissection and a working lumen. However, Wagner discloses a surgical dissection tool should includes a working lumen and a port for fluid dissection for the purpose of delivering the pharmacological agent, for example, saline solution, phosphated buffer solution, an analgesic, an antibiotic, a hemostatic agent, an anti-inflammatory, or other useful drug or fluid, thereby, improving wound healing (paragraph [0040]).
10. **Claim 52 is rejected under 35 U.S.C. 103(a) as being unpatentable over Boyd et al. and Wagner as applied to claim 43 above and further in view of Chin (Pub No. US 2004/0102804 A1).**
11. Boyd as modified by Wagner discloses a method of separating tissue at a selected site substantially as claimed except for the steps are part of a procedure for treating atrial fibrillation. However, Chin discloses using a dissector for performing

Art Unit: 3731

steps of treating atrial fibrillation is old and well known in the art (paragraph [0253]), therefore, it would have been obvious to one of ordinary skill in the art to further utilize the device and method of Boyd as modified by Wagner in the field of treating atrial fibrillation.
